Professional Summary

Data Scientist and Full Stack Developer with hands-on experience designing, developing, and deploying AI-powered applications, machine learning models, and cross-platform mobile apps. Expertise in building end-to-end ML pipelines and responsive web platforms using Python, TensorFlow, Scikit-learn, React.js, and Flutter. Skilled in Computer Vision, Deep Learning, Generative AI (RAG), and model deployment for production-ready applications. Passionate about solving real-world problems through scalable architecture, intelligent systems, and data-driven decision making.

Technical Skills

- Programming Languages: Python, Java, JavaScript, TypeScript, Dart, SQL, C
- Machine Learning & Data Science: TensorFlow, Scikit-learn, Pandas, NumPy, OpenCV, Convolutional Neural Networks (CNN), Computer Vision, Data Preprocessing, Feature Engineering, Classification, Deep Learning
- Generative AI & Automation: Retrieval-Augmented Generation (RAG), Prompt Engineering, LLM Applications, AI Workflows
- Frontend & Mobile: React.js, Next.js, Flutter, Android Development, HTML5, CSS3, Tailwind CSS
- Backend & Cloud: Firebase, REST APIs, AWS, Vercel, TensorFlow Lite (TFLite)
- Soft Skills: Problem Solving, Analytical Thinking, Team Collaboration, Technical Documentation, Agile Learning

Education

B.E. Computer Engineering | A. P. Shah Institute of Technology, Thane

CGPA: 8.5/10 | Expected Graduation: 2028

Diploma in Information Technology | Muchhala Polytechnic, Thane |

89% | Graduation Year: 2025

Experience

- Mobile Application Development Intern | NASTECH | Jun 2025 – Jul 2025 • Developed cross-platform responsive mobile applications using Flutter and Dart, implementing efficient widget architecture, state management, and navigation systems.
- Strengthened practical software engineering skills through collaborative development, API integration, debugging, and testing workflows for real-world application deployment.

Projects

CropIQ – AI Crop Disease Identifier [\[Live\]](#) | [\[GitHub\]](#)

- Developed CropIQ, an AI-powered agricultural platform utilizing Computer Vision, TensorFlow, and CNNs to analyze crop leaf images and accurately predict disease categories, reducing manual inspection efforts for farmers.
- Built a responsive web platform to simplify disease detection using React.js, Firebase, and TFLite, integrating deployment workflows on Vercel to enable real-time accessibility and seamless user interaction.

Kepler-404 – AI-Driven Super-Resolution & Colorization of Landsat 9 Thermal Imagery [\[Live\]](#) | [\[Github\]](#)

- Developed a full-stack geospatial AI application that enhances **Landsat 9 Thermal Infrared (TIR)** imagery by super-resolving 200m thermal data to 100m resolution and colorizing grayscale heat maps into physically consistent RGB imagery using a generative AI pipeline.
- Engineered an end-to-end geospatial AI pipeline using **Python, Flask, OpenCV, Rasterio, GDAL, and NumPy**, preserving CRS metadata and exporting GeoTIFFs compatible with QGIS and ArcGIS. Designed a modular architecture for integrating **ESRGAN/SwinIR** super-resolution and **Pix2Pix/Diffusion** colorization models..

Certifications

- The Ultimate Job Ready Data Science Course – CodeWithHarry
- The Complete Full-Stack Web Development Bootcamp – Udemy
- Mobile Application Development using Dart & Flutter – NASTECH

Achievements

- Participated in the MSBTE State Level Project Competition 2025 (Mumbai Region) presenting the CropIQ platform.
- Built and deployed multiple AI-powered applications, predictive models, and responsive full-stack platforms.

- Completed comprehensive industry-focused training spanning Mobile App Development, Data Science, and Full Stack Web Architecture.
