Professional Summary

Data Scientist and Android Engineer with 2+ years of experience building intelligent mobile applications and deploying end-to-end machine learning pipelines for production environments.

Core Skills

Python, Java, JavaScript, TypeScript, Dart, SQL, C, React.js, Next.js, Flutter, Android, TailwindCSS, TensorFlow, Scikit-learn, Pandas, NumPy, OpenCV

Machine Learning, Deep Learning, Computer Vision, Generative AI (RAG), Feature Engineering, Firebase, REST APIs, AWS, Vercel, TensorFlow Lite, Agile

Professional Experience

NASTECH **Jun 2024 – July 2024**

Mobile Application Developer Intern

- Developed **Cross-platform**, responsive mobile applications using **Flutter and Dart**, engineering efficient widget architectures and robust state management systems.
- **Led end-to-end migration of large native Android applications to Flutter,** reducing feature delivery timelines by 30% and improving runtime performance by 25%.
- Collaborated across teams to **integrate APIs**, debug codebases, and **optimization of testing workflows**, ensuring stable and production-ready application deployments.
- Owned **production releases, monitoring, and performance optimization** for high-traffic consumer applications.

Projects

CropIQ – AI Crop Disease Identifier [Live] | [GitHub]

- Developed an **AI-powered agricultural** platform utilizing Computer Vision, TensorFlow, and CNNs to analyze crop leaf images and accurately predict disease categories, significantly reducing manual inspection efforts for farmers.
- Built a responsive web application for real-time disease detection using React.js, Firebase, and TFLite, **integrating automated deployment** workflows on Vercel to ensure seamless accessibility and user interaction.

Kepler-404 [Live] | [Github]

- Developed a full-stack geospatial application that **enhances Landsat 9 Thermal Infrared** (TIR) imagery, super-resolving **200m thermal data to 100m** and colorizing grayscale heat maps into **physically consistent RGB** imagery via a Generative AI pipeline.
- Engineered an **end-to-end processing pipeline** using Python, Flask, OpenCV, Rasterio, and **GDAL to preserve CRS metadata** and export QGIS/ArcGIS-compatible GeoTIFFs, designing a modular architecture for **ESRGAN/SwinIR and Pix2Pix models.**

Education

B.Tech Computer Engineering **Expected:2028**

A. P. Shah Institute of Technology
